SHS - System Technology Institute (STI)   *Burgos St. La Paz*
Information Communication Technology   *Iloilo City*
                                                                                        April 2016 - May 2018

Academic/Awards:

Programmer of the year awardee 2018

Experiences

Alabaster Technologies Inc.   *Aklan*
Full Stack Web Developer Intern   *March - May 2022*

Alabaster Technologies is an Aklan based company that serves the local community with their various applications, my core roles as a full stack web developer intern are:

- Tasked to develop an e-commerce full stack website for NFT's using MERN stack technology and NextJS.
- Turning figma prototype into working deployable website.
- Develop reusable functions for backend and reusable components for frontend.

Freelancing

Freelance Developer

I engaged myself into freelancing as a freelance developer creating various projects required by clients, my core roles in freelancing are:

- Involved in the entire lifecycle of the project.
- Frequent conversation with clients during the project's development stages.
- Work in collaboration with other developers for the project.
- Delivering good product that satisfies the client's needs and leave a remarkable impression.

Some freelance projects I handled are:

QR Inventory System

Summary:

Developed a comprehensive QR inventory system, enabling seamless management of products with detailed descriptions. Implemented a user-friendly interface for clients, empowering them to effortlessly create accounts, set up payment methods, and conveniently make purchases. The system generates downloadable and printable QR codes for each product, enhancing in-store item identification. Additionally, customers can utilize the user interface to effortlessly scan product QR codes, add items to their cart, and proceed to a streamlined checkout process.

Tech Stack: Figma, ReactJS, Tailwind CSS, Flask, Python, SQL, and GitHub

Key Contributions:

- Involved in the entire lifecycle of the software from designing to deployment for use.
- Utilized multiple technologies to deliver a good quality product to the client.
- Collaborated with other developers to deliver the product on time.
- Frequent meetings with clients for fast feedback and applying changes.

Job Posting Site

Summary:

Involved in the entire development of a comprehensive job posting platform, featuring both web and mobile applications leveraging Firebase real-time database. The mobile application offers an array of features for employers and employees, including job creation, posting, setting requirements, managing applications, job searches, and the application process, including assessments for enhanced applicant profiles.

The web application serves as the admin side, providing administrators the ability to oversee user actions, analytics, and generate reports.

Tech Stack: Figma, React Native, ReactJS, Tailwind CSS, Firebase

Key Contributions:

- Orchestrated the entire software development process.
- Employed a diverse tech stack to deliver a superior product.
- Collaborated effectively with fellow developers for timely project delivery.
- Conducted regular client meetings to ensure swift feedback incorporation and seamless changes.
